

Differential by-pass valve. F-M union connection

Size: 22mm

Description:

Differential by-pass valve, adjustable with graduated scale.

Max. working pressure: 10 bar.
Temperature range: 0–110°C.
Max. percentage of glycol: 30%.

International approvals:

Function: Easy to operate and set the differential opening pressure. Automatically stabilizes circulation flow rate in pumped heating systems when the thermostatic radiator or zone valves close, therefore, protecting the pump from pumping against a closed head.
