Foot Valve with strainer

Size: 3/4”

Maximum working temperature: 110 ^{o}C
Maximum working pressure: 16

Strainer: AISI 304 Inox Steel
Valve: Brass

Function:

Foot Valves are a form of check valve, installed at the bottom of Pump suction line, inside the wet well. Foot valves are an inexpensive way to prime a single centrifugal pump. Since Foot Valves are continually submerged in the wet well and not readily accessible for inspection or repair, it is important to select a Foot Valve of high quality long wearing construction.
