

## Oil filter with isolation valve

Connection Sizes:

In: ½" BSP Swivel  
Out: 10mm compression with copper olive

Body: Aluminium  
Filter Bowl: Steel  
Filter: Nylon (40 – 50 µm)

Flow rate: 151 L/hr kerosene at 1 metre head.  
Weight: 320g

- For use with the KBB and KBB/E Fire Valve Range.
- Oil filter and Isolation valve in one tidy, robust, and compact unit.
- Avoid expensive engineer call outs.

For use on bottom take-off connections on steel or plastic domestic heating oil tanks. The filter and isolating valve is positioned in the oil feed pipe, usually near the tank, running to the boiler. This insures that the oil supply can quickly be turned off, for example during boiler servicing.

The OFV's are fitted with cleanable nylon filters to trap coarse particles; this is important because even the smallest particle of dirt or rust can permanently damage the boilers oil pump and or block the very fine oil atomizing jet.
